

Senior UX and Experience Leader with 20+ years of experience driving user-centred design strategy across healthcare, non-profits, and digital agencies.

Director of Experience Strategy and Design, Current Health

April 2022 – May 2025, Edinburgh / remote

Team growth	Daily active patient increase:	Strategic KRs successfully led:
400%	1400%	3

Current Health provides the services and technology (for example, wearable devices, patient apps and clinical dashboards for observations and alarming) that healthcare organisations need to monitor patients remotely.

My team of UX Designers, Content Designers and Product Engineers was responsible for researching, defining and designing the end-to-end experience for both patients and healthcare professionals across all our product offerings. We worked closely with the Product, Engineering, Regulatory, and Quality teams, in both the physical and digital worlds, to design experiences that met user needs and regulatory requirements, providing patients with a range of conditions the ability to be safely, comfortably and cost-effectively monitored at home.

Key successes

Design Team Leadership

- Grew a UK/US based UX team from 2 to 10, ensuring a strong representation in a range of UX skills
- Team was made of both ICs and managers
- Worked with each team member to define tailored learning pathways and ensured each had the time to dedicate to continued learning
- Mentored the UX team as well as individuals across the company who had an interest in our work
- Championed Design and a user-centric approach to everything we did at Current Health
- Maintained the highest team member satisfaction score across the Product Team

Product team structure

- Worked closely with Directors of Product and Engineering to define project squad structures and ways of working
- Ensured UX had strong representation across all our product offerings ensuring efficient delivery of UX artefacts for all projects

Workflows and processes

- Formalised our discovery/research process, empowering UX to define, document and share required activities early on to help manage stakeholder expectations and set clearer timeframes for this phase
- Reduced average project discovery time by 60% while improving the quality of the output
- Introduced a 'Maintenance cycle' for BAU work, which clearly defined the planning and delivery process for smaller, repeatable tasks, dramatically reducing the time required for this work
- Worked with Regulatory and Senior Leadership teams to embed UX within our governance process and ensure everything we did was documented, compliant and audit ready

Strategy

- Defined and championed our 'Product Delivery Strategy' which aimed to improve how users received and interacted with our offering – both physically and digitally
- Created physical and digital concepts for this work which proved the case for a 30% reduction in logistics costs for the business

Delivery

- Led by example, delivering UX research and design work for multiple projects with a focus on third-party medical device integrations and the experiences of both patients and healthcare professionals using them

Tools used

- Figma, Miro, Jira, Orcanos
-

UX Principal, Craneware

Jan 2018 – April 2022, Edinburgh

Team growth:	FE development time reduction:	Products supported:
2000%	50%	9

Craneware products play a critical role in the US healthcare system, the largest in the world – a third of US hospitals use Craneware products to manage multiple complex processes and large amounts of data.

My team of 20 were responsible for all UX, UI, design and documentation work across Craneware's entire portfolio of products, providing a key bridge between product strategy, user need and technical delivery, and between our US and UK teams. The UX team was a cross-functional team made up of UX-ers, visual designers, front-end developers, researchers and technical writers, with a responsibility to understand both user need and business function.

Key successes

- Design and development of in-platform Design system 'The Nest'
- Complete redesign of SaaS platform to support multiple product offerings through one portal
- Product owner for Reference toolkit offering, embedding it seamlessly within our platform
- Migration of 3 legacy products onto SaaS platform

Principal Experience Consultant, Manifesto Digital

Oct 2016 – Jan 2018, London

Team growth:	Awards won:	Key accounts led:
400%	1	9

I developed and led Manifesto's User Experience function, driving the agency forward as part of its Senior Management Team by developing UX tools and knowledge, and – as a result of this new function – bringing on board a considerable number of new clients.

Key project work

Strategy

- Following in-depth research into **Stonewall's** membership offering, including surveys, depth interviews and competitor analysis, we created a three-year product and project roadmap detailing what was required to meet both user needs and organisational objectives.
- 22 contextual enquiries in schools across the UK allowed me to provide strategic guidance to **the British Heart Foundation** on how they could better provide CPR training to schools.

Discovery

- To understand the requirements for a full website rebuild, I conducted a large-scale discovery project for the **Royal College of Anaesthetists**, consisting of 12 internal stakeholder workshops, student and trainee workshops, and a survey. Outputs of this work included key recommendations and work themes, high-level concepts and prototypes, and a content strategy.
- The **Royal British Legion** sought to understand its users better to help inform a rebuild of its main website. Under my direction, we delivered requirements, recommendations and guidance following an extensive user research project that involved a user survey and 16 in-depth interviews with former servicemen and women.

Design

- Working closely with both the client (**Genesis Housing**) and their residents, I ran a collaborative design project over six weeks, resulting in detailed wireframes, clickable prototypes and eventually an award-winning new product, including a chatbot, designed to help residents report repair needs and for Genesis to respond to reports.
- The European Bank of Reconstruction and Development have over 50 departments working across 39 countries and asked us to design an intranet that could meet their needs. We used a theme-based design sprint approach where each week we researched a specific theme with the client (for example, personalisation), then created initial designs, tested with real users and iterated based on results – allowing Manifesto to deliver clear guidance to the build team. The Norman Nielson Group recognised the resulting product as one of the top ten Intranets of that year.

Head of Digital & Creative, Blood Cancer UK

May 2014 – May 2016, London

Team growth:	Budget managed:	New product launches:
300%	£1.5 million	4

Created and led a 25-strong agile 'internal agency' team made up of Drupal developers, producers, copywriters, digital marketers, designers, UX and ICT professionals. The formation of this Digital & Creative team allowed us to deliver on a wide range of projects in a truly integrated and collaborative way across all aspects of this high-profile charity's lifesaving work.

Responsible for the planning and budgeting of around £1.5 million in annual marketing, development and ICT spend.

Other roles
